

Move WSUS Content

You can move the content to another drive/location using the **wsusutil.exe**, find this utility in **C:\Program Files\Update Services\Tools** Command: `wsusutil.exe movecontent %content path% %logfile% %content path%` : The new root for content files. The path must exist. %logfile% : Path and filename of the log file to create.

You need to create the directory on the new partition first and then use the utility with the following example: "`wsusutil.exe movecontent U:\WSUS\ U:\wsusmove.log`"

You can also use "skipcopy" command.. -skipcopy : Indicates that only the server configuration should be changed and that the content files should not be copied "`wsusutil.exe movecontent U:\WSUS\ U:\wsusmove.log -skipcopy`"
