

# Powershell

## Create a file

### # Create-NewFile.ps1

#### # Full path of the file

```
$file = 'c:\temp\important_file.txt'
```

#### #If the file does not exist, create it.

```
if (-not(Test-Path -Path $file -PathType Leaf)) {
```

```
try {
```

```
$null = New-Item -ItemType File -Path $file -Force -ErrorAction Stop
```

```
Write-Host "The file [$file] has been created." -ForegroundColor Yellow
```

```
}
```

```
catch {
```

```
throw $_.Exception.Message
```

```
}
```

```
}
```

#### # If the file already exists, show the message and do nothing.

```
else {
```

```
Write-Host "Cannot create [$file] because a file with that name already exists." -ForegroundColor
```

```
Red
```

```
}
```
