

Powershell

Add content to a file

Update-FileContents.ps1

#Full path of the file

```
$file = 'c:\temp\important_file.txt'
```

If the file exists, append a new GUID value in the file.

```
if ([System.IO.File]::Exists($file)) {  
  try {  
    $newValue = ((New-Guid).Guid)  
    Add-Content -Path $file -Value $newValue -ErrorAction STOP  
    Write-Host "The file [$file] has been updated with [$newValue]" -ForegroundColor Yellow  
  } catch {  
    throw $_.Exception.Message  
  }  
}
```

If the file does not exist, show a message and do nothing.

```
else {  
  Write-Host "The file [$file] could not be updated because it does not exist." -ForegroundColor Red  
}
```
