How to Find Computer Locking Active Directory Account

Find Locking Computer Using Event Logs

- 1. Login to the Domain Controller where authentication took place.
- 2. Open "Event Viewer".
- 3. Expand "Windows Logs" then choose "Security".
- 4. Select "Filter Current Log..." on the right pane.
- 5. Replace the field that says "<**All Event IDs**>" with "**4740**", then select "**OK**".
- 7. Select "**Find**" on the right pane, type the username of the locked account, then select "**OK**".
- 8. The Event Viewer should now only display events where the user failed to login and locked the account. You can double-click the event to see details, including the "Caller Computer Name", which is where the lockout is coming from.
