

Proxmox

How To Disable Proxmox VE Subscription Notification

To disable the Proxmox subscription notification, access the server's console via SSH, (On Version 9.0.10 tested)

back up the proxmoxlib.js file,

```
cd /usr/share/javascript/proxmox-widget-toolkit/
```

```
cp proxmoxlib.js proxmoxlib.js.bak
```

```
vim proxmoxlib.js
```

find and edit the line containing `!== 'active'` to `== 'active'`, (On my file it was line 615)

```
612     res === null ||
613     res === undefined ||
614     !res ||
615     res.data.status.toLowerCase() !== 'active'
616   ) {
617     Ext.Msg.show({
618       title: gettext('No valid subscription'),
619       icon: Ext.Msg.WARNING,
```

```
612     res === null ||
613     res === undefined ||
614     !res ||
615     res.data.status.toLowerCase() == 'active'
616   ) {
617     Ext.Msg.show({
618       title: gettext('No valid subscription'),
619       icon: Ext.Msg.WARNING,
```

save the file, restart the pveproxy service, **systemctl restart pveproxy.service**

and clear your browser's cache.

You can perform the edits either by manually modifying the file or by using a sed command.
