Colorscheme VIM

Instructions

1. [Connecting via SSH to your server](#)
2. Browse to your user directory with the following command:
   cd ~
3. Create a .vimrc file with the following command:
   vim .vimrc
4. Click i for insert mode.
5. Type the following command below to enable syntax and give a specific colorscheme.
   This example uses the desert colorscheme:

   syntax on
    colorscheme desert

6. Hold Shift and hit : then type wq to save and quit the file.
7. You should now be able to use vi and the colorscheme you choose to edit files on your grid
